

ARCA Branch

Software Platform

ARCA Branch

Branch software that plays well with others.

The Software

ARCA Branch is a trusted software solution designed to seamlessly integrate our cash recycler technology into the retail branch.

With more than 75,000 installations worldwide, the architecture behind ARCA Branch is a proven platform that will support your infrastructure environment. It allows you to concentrate on your core competencies as a financial institution and not on how hardware interacts with your complex systems.

Features

In today's branch, flexibility is paramount and ARCA Branch fits the bill. It can be used in a traditional cash recycler setting behind the teller line, by a roaming teller using a tablet, or even as a customer-facing application on an assisted self-service device. It can also be used in a standalone environment.

From an operational leader's perspective, ARCA Branch helps to integrate cash recycling seamlessly in your existing processes and optimize branch cash inventory.

Functions

- Integrates with all current ARCA cash recyclers and assisted self-service devices
- Each ARCA Branch server maintains a local database storing an electronic journal of all activities allowing for easy report creation
- Supports all common balancing systems and teller functions including: deposits, withdrawals, counting, denomination exchanges, and more
- Multiple user interfaces can be configured with three standard user profiles: teller, branch manager, and administrator
