

JetSort Coin Sorter

JetSort

Compact and powerful.

The Product

Coin payments are part of doing business for retailers. But you can extend the benefits of cash automation by incorporating the JetSort coin counter into your back office cash operations. Enjoy faster and more accurate coin processing for easier, more efficient end of day processes.

Cashiers simply pour till coin into the tray and the JetSort counts and sorts the coins then reports totals for till balancing. The JetSort can also be integrated with a cash recycler to maximize the productivity and efficiency of managing both cash and coin inventory. While small in size, the technology is fully featured to provide a variety of options and adjust to your business needs.

Features

Compact but powerful, the Jetsort can process up to 2,200 coins per minute while ensuring balanced deposits with 99.995% accuracy. Coins can be sorted into drawers for reuse or directly into bags for bank deposit. The small footprint saves space and allows front access to coins.

The JetSort allows you to assign unique operator ids, creating an audit trail for transactions for complete cashier accountability. The device also provides adjustable bag/box stop limits by denomination for accurate counts every time and allows for easy coin packaging.

Specs
